

# Team Status Report #4

**Group members:** Christina Sarkisyan, Ethan Dorta, Joseph Strickland, Lolo Aboufoul, Zaina Shawar

- **Goals from Previous week**

This week, we plan on applying our user stories and try to apply the features we have individually described as part of each user story. This will involve coding and creating files that are able to be tested and will require application of what was learned from previous Flask tutorials. We will also work on organizing our presentation and seeing who is comfortable with presenting each part of our software. Finally, the backlog will continue to be updated with all changes made in the next sprint.

- **Weekly Progress: what you've done, what worked, what you learned, where you had trouble, and where you are stuck.**

This week, we further developed our user stories and described them more in detail. We derived scenarios for each of our user stories and explained how exactly users will apply the features we have placed as part of our software. This week we updated our git repository with necessary files that we will use when actually coding the software next week.

- **Plans and goals for upcoming week (4/12-4/16)**

Next week we will begin developing the code for our software. We will utilize information from previous Flask practice activities to develop the code and implement the features we have previously decided on adding. We will also be updating the git repository with all changes made. Each team member will be responsible for a certain amount of work, and will have to update the git repository as they complete their assigned tasks. Next week will involve the main portion of software development.

- **Agenda for next meeting**

- Decide what tasks need to be done to create basic features of software
- Decide which team member will be responsible for each feature
- Set a schedule for when tasks related to coding of software need to be completed
- Divide portions of coding between team members
- Begin coding the basic features of RSVMe software
